VOLVO WHEEL LOADERS L60G, L70G, L90G

A PASSION FOR PERFORMANCE.

At Volvo Construction Equipment, we're not just coming along for the ride. Developing products and services that raise productivity - we are confident we can lower costs and increase profits for industry experts. Part of the Volvo Group, we are passionate about innovative solutions to help you work smarter - not harder.

Helping you to do more

Doing more with less is a trademark of Volvo Construction Equipment. High productivity has long been married to low energy consumption, ease of use and durability. When it comes to lowering life-cycle costs, Volvo is in a class of its own.

Designed to fit your needs

There is a lot riding on creating solutions that are suited to the particular needs of different industry applications. Innovation often involves high technology - but it doesn't always have to. Some of our best ideas have been simple, based on a clear and deep understanding of our customers' working lives.

You learn a lot in 175 years

Over the years, Volvo has advanced solutions that have revolutionized the use of construction equipment. No other name speaks Safety louder than Volvo. Protecting operators, those around them and minimizing our environmental impact are traditional values that continue to shape our product design philosophy.

We're on your side

We back the Volvo brand with the best people. Volvo is truly a global enterprise, one that is on standby to support customers quickly and efficiently - wherever they are.

We have a passion for performance.

TWO MACHINES IN ONE.

Handle your workload with Volvo's L60G, L70G and L90G: versatile wheel loaders that get the job done. Volvo's unique TP linkage delivers the benefits of two machines in one thanks to high breakout torque and parallel movement through the entire lifting range. Change attachments quickly with the attachment bracket for unbeatable flexibility on site.

Load-sensing hydraulics

Load-sensing hydraulics deliver power to hydraulic functions only when it's needed, without unnecessary oil pumping, for lower fuel consumption and more sensitivity in load handling.

Long reach and precision

Smooth and precise pilot-operated hydraulics enable the operator to easily control attachments with minimum effort and high precision in all applications.

Looking for performance? Look no further than the L60G, 70G and 90G – built to perform with power and precision. Volvo quality from top to bottom means all components work in perfect harmony for the best operation. You can rely on Volvo.

Differential lock for traction

The operator can select the differential lock to transfer 100% power to the wheels to reduce tire slippage for maximum traction on soft and slippery ground.

Fully Automatic Power Shift (FAPS)

Volvo's FAPS system simplifies operation by automatically selecting the right gear so the operator doesn't have to. Operator efficiency is significantly improved by allowing more concentration on the work in hand.

Heavy-duty axles

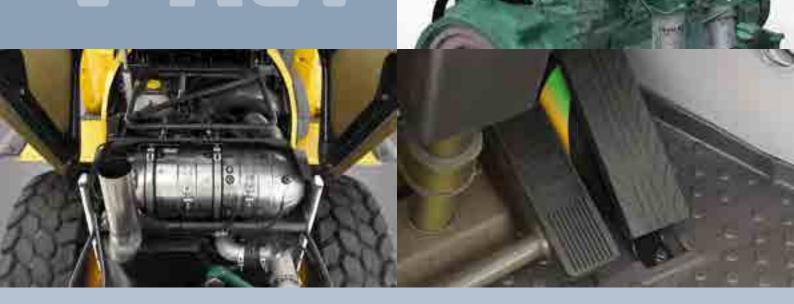

Volvo's heavy-duty wet brake axles deliver rim pull to the operation. Axle housings absorb all loads from the machine weight to reduce working stress on the axle shafts for longer service life.

POWERED BY EFFICIENCY.

Volvo's powerful 6 litre, 6-cylinder turbocharged diesel engine meets Tier 4 Interim/ Stage IIIB engine emissions requirements and delivers high torque at low engine speeds for industry-leading performance and fuel economy.

Fuel efficient Volvo V-ACT

Volvo Combustion Technology, V-ACT, is tailored for use in demanding applications. Fuel injection is electronically controlled based on temperature, pressure, load and engine speed in order to achieve optimal combustion. The result: high performance and low emissions.

Reduce emissions on the move

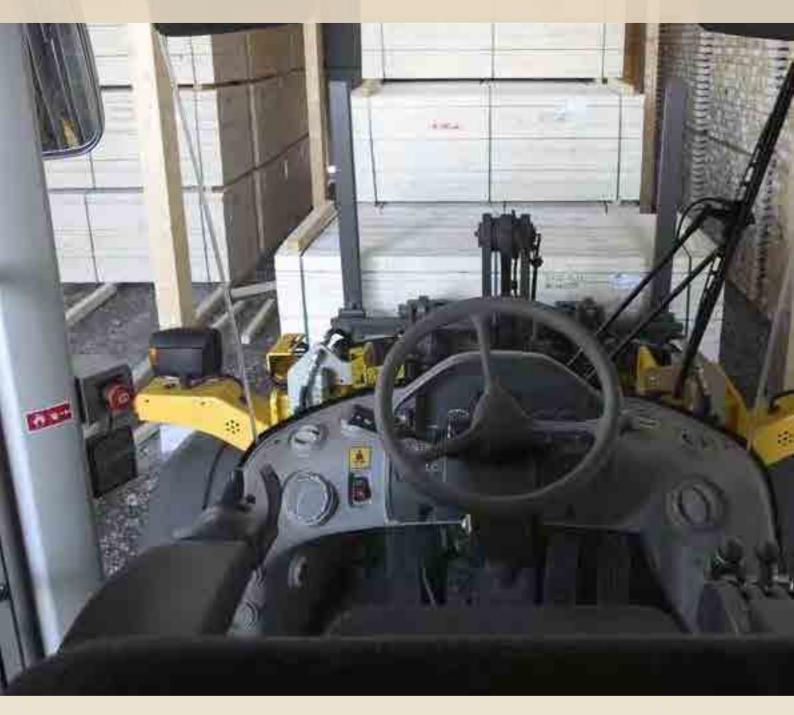

Reduce emissions without interrupting machine operation with Volvo's regeneration process. The active-type Diesel Particulate Filter (DPF) includes a Diesel Oxidation catalyst function, which works as you operate.

Operate efficiently with the eco pedal

The eco pedal encourages the operator to engage the throttle pedal with ease to lower fuel consumption, by applying the appropriate amount of mechanical counter pressure (push-back) to avoid excessive fuel use.

BE IN CONTROL.

Command and control in Volvo's industry-leading cab. Ample leg room, storage space and climate control help operators remain focused when the work gets tough. State-of-the-art Volvo Contronic system continuously monitors machine performance, leaving you to admire your work from all angles through the excellent cab visibility.

have space for storage.

Industry-leading cab

All-round visibility is at the forefront of design for Volvo's ROPS/FOPS approved cab. The cab is spacious allowing ample room to stretch out your legs and still

Load-sensing steering

The load-sensing hydraulic steering system is only activated when the steering wheel is turned for lower fuel consumption, quick response and exact movement – even at low engine speeds.

Control your climate

Regardless of the weather, operators stay at the ideal temperature with Volvo's in-cab climate control system – choose Automatic Heat Control (AHC) or Air Conditioning (AC) to stay focused and efficient.

EASY TO MAINTAIN.

Time means money on site. That's why the new, electrically opening, engine hood is even easier to access for fast maintenance and service checks. Volvo's high-tech MATRIS and VCADS Pro software offers more in-depth engine and machine operation analysis to increase your uptime.

Maintenance-free cradles

The rear axle cradles are maintenance free and includes two grease-lubricated-for-life roller bearings and two oil bath, pre-filled-for-life bushings to save service time.

Analysis software

Maintain uptime using Volvo's analysis software. MATRIS uses output from the Contronic system to analyze machine operation, while the VCADS Pro software allows analysis and adjustment of engine performance by plugging a PC into the engine.

Hydraulic cooling fan

Hydraulically driven, electronically controlled cooling fan, located between the engine and radiator, speeds-up only when necessary to lower fuel consumption and sound levels.

GET FLEXIBLE.

Volvo attachments give you more flexibility. Each attachment from the extensive range is perfectly matched to the machine's link-arm geometry and breakout, rim pull and lifting force. All attachments can be fastened and removed quickly thanks to Volvo's VAB-STD attachment bracket so you can 'connect and go'.

Hydraulic attachment bracket

Volvo's hydraulic attachment bracket, VAB-STD, has been internationally ISO standardized. The bracket allows quick interchange of attachments for increased flexibility on site. The strong, open bracket design enables the operator to clearly see each attachment from the cab.

FULLY LOADED.

TOP PERFORMANCE DESERVES SUPPORT.

The day you receive your new Volvo Wheel Loader is just the start of your working relationship with Volvo. From service and maintenance to our CareTrack telematics system – Volvo has a comprehensive and sophisticated aftermarket portfolio to continuously add value to your business.

Volvo designed and built your machines, so no-one knows how to keep them working in top condition more than us. When it comes to your machine, our Volvo trained technicians are the experts.

Our technicians work with industry leading diagnostic tools and techniques, using only Genuine Volvo Parts to deliver the highest levels of quality and service. Talk to your Volvo dealer about how genuine Volvo services can best provide the service and maintenance plan that is the right fit for you and your business.

State-of-the-art machines require state-of-the-art support and your Volvo dealer can provide a catalogue of services designed to get the most out of your machine, helping you maximise uptime, productivity and residual value. Your Volvo dealer can provide a number of sophisticated support offers, including:

Service plans ranging from routine wear inspections, through to comprehensive maintenance and repair agreements.

Analysis and diagnostics to help you understand how your machine is running, highlight potential maintenance issues and identify where performance can be improved.

Eco Operator training courses can help your operators work towards a safer, more productive and fuel efficient performance.

VOLVO L60G, L70G, L90G IN DETAIL.

6-cylinder, 6 liters inline turbocharged diesel engine with an advanced fuel injection system with the common rail. Fuel is distributed under high pressure from a high-pressure accumulator, the rail. One belt driven high pressure pump deliver the fuel to the rail and then further on via high-pressure pipes to the electronically operated fuel injectors. Cooled exhaust gas recirculation and particle filter with active regeneration.

Drivetrain

Torque converter: Single-stage

Transmission: Volvo countershaft transmission with single lever control. Fast and smooth shifting of gears with Pulse Width Modulation (PWM) valve.

Transmission: Volvo Automatic Power Shift (APS) gear shifting system with fully automatic shifting 1-4 and mode selector with 4 different gear shifting programs, including AUTO mode. Axles: Volvo fully floating axle shafts with planetary hub reductions and cast steel axle housing. Fixed front axle and oscillating rear axle. 100% differential lock on the front axle.

Brake system

Service brake: Volvo dual-circuit system with nitrogen charged acculmulators. Outboard mounted hydraulically operated, fully sealed oil circulation cooled wet disc brakes. The operator can select automatic declutch of the transmission when braking through Contronic.

Parking brake: Dry disc brake mounted on the transmission output shaft. Applied by spring force, electro-hydraulically released with a switch on the instrument panel.

Secondary brake: Dual brake circuits with rechargeable accumulators. One circuit or the parking brake fulfi lls all safety requirements

Standard: The brake system complies with the requirements of ISO 3450, 71/320/EEC

VOLVO L60G, L70G, L90G IN DETAIL.

Cab

Instrumentation: All important information is centrally located in the operator's field of vision. Display for Contronic monitoring system Heater and defroster: Heater coil with filtered fresh air and fan with auto and 11 speeds. Defroster vents for all window areas. Operator's seat: Operator's seat with adjustable suspension and retractable seatbelt. The seat is mounted on a bracket on the rear cab wall and floor. The forces from the retractable seatbelt are absorbed by the seat rails.

Standard: The cab is tested and approved according to ROPS (ISO 3471, FOPS (ISO 3449). The cab meets with requirements according to ISO 6055 (Operator overhead protection - Industrial trucks) and SAE J386 ("Operator Restraint System")

trucks) and SAE J386 ("(Operator Restraint System").

Hydraulic system

System supply: One load-sensing axial piston pump with variable displacement. The steering function always has priority. Valves: Double-acting 2-spool valve. The main valve is controlled by a 2-spool pilot valve.

Lift function: The valve has three positions; raise, hold and lower position. Inductive/magnetic automatic boom kickout can be switched on and off and is adjustable to any position between maximum reach and full lifting height.

Tilt function: The valve has three functions; rollback, hold and dump. Inductive/magnetic automatic tilt can be adjusted to the desired bucket angle.

Cylinders: Double-acting cylinders for all functions.

Filter: Full flow filtration through 10 micron (absolute) filter cartridge. Pilot system: 3.5 MPa

Bucket Selection Chart

The chosen bucket is determined by the density of the material and the expected bucket fill factor. The actual bucket volume is often larger than the rated capacity, due to the features of the TP linkage, including an open bucket design, good rollback angles in all positions and good bucket filling performance. The example

represents a standard boom configuration.

Example: Sand and gravel. Fill factor ~ 105%. Density 1.65 t/m³.

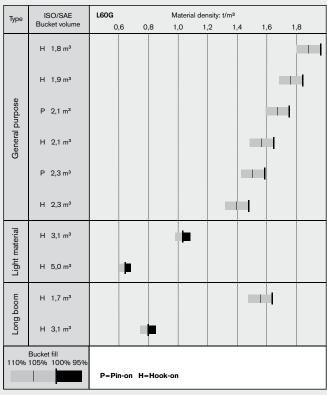

Result: The 1.9 m³ bucket carries 2.0 m³. For optimal stability always consult the bucket selection chart.

Material	Bucket fill, %	density,	ISO/SAE bucket volume, m ³	Actual volume, m ³
Earth/Clay	~ 110	~ 1.55 ~ 1.40 ~ 1.30	1.9 2.1 2.3	2.1 2.3 2.5
Sand/Gravel	~ 105	~ 1.65 ~ 1.50 ~ 1.35	1.9 2.1 2.3	2.0 2.2 2.1
Aggregate	~ 100	~ 1.75 ~ 1.55 ~ 1.55	1.9 2.1 2.3	1.9 2.1 2.3
Rock	≤100	~ 1.70	1.7	1.7

The size of rock buckets is optimized for optimal penetration and filling capability rather than the density of the material.
