# SIT AT YOUR COMPUTER - AND VISIT THE WORKSITE

GPS is used to detect precisely where the machines are located.

The machines are equipped with a computer, with an integrated GPS receiver and modem, plus antenna.

Data is transferred by mobile phone or satellite.

The information is processed in a database.

The user logs into their Website and can efficiently monitor the machines remotely and make the right decisions.

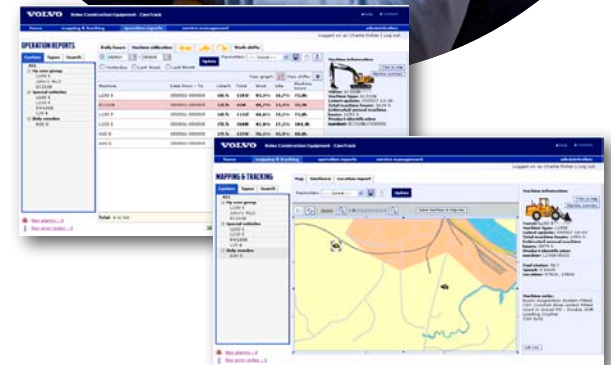

**CareTrack is a telematics system** that has been developed to work with a Volvo machine's own diagnostic system.

CareTrack combines two independent systems; GPS and the mobile phone network, or data via satellite.

These systems are coordinated in CareTrack and only two items need to be installed in the machine: a small computer with an integrated GPS receiver and modem plus an antenna.

On a password protected Website you can for example "see" precisely where the machine is located, the rate of fuel consumption and when it is time for the next service. With immediate access to the correct facts on your machines you can analyse the situation shift by shift and make decisions that result in higher productivity and shorter downtimes.

CareTrack also offers some theft protection, as you can "limit" the machine via your computer to a certain geographical area and also decide which hours of the day the machine can be operated.

# CARETRACK – ON TRACK AND IN CONTROL

The art of running an operation with maximum profitability is to create a functioning whole, made up of many different parts. CareTrack is an effective and flexible tool with many advantages.

CareTrack provides increased safety, control of the machines' service, increased productivity, greater availability, better control of rentals, as well as superior control of the machine fleet and the whole operation.

Simply put, with CareTrack you can get the best out of your machines – today, and in the long term.

CareTrack is available in two versions.

**CareTrack Basic:** information on machine position, engine hours, service reminders and the possibility to control the areas in which the machine can operate.

**CareTrack Advanced:** contains everything in CareTrack Basic plus, for example alarm, error codes, and operating data.

Contact your local Volvo dealer for more information.

## CareTrack – fast and correct information

CareTrack gives you the answers to many important questions. Plus you receive all information at a password protected Website that you have access to.

This way you always know for example where your machine is located, you know when it is time for service and you know that the machine is in optimum use.

Your business can be utilizing the rapid and accurate information available via CareTrack, making it a profitable investment.

CareTrack® is a registered trademark of Volvo Construction Equipment.

**More care. Built in.**

Under our policy of continuous improvement, we reserve the right to change specifications and designs without prior notice. Please contact your dealer for further information.
