On site works key success: Flexibility, versatility, safety and reliability

### Integrated design
Top bucket interface and pin-on Volvo quick coupler have been designed together for a perfect fit and integration. Distance between machine pivot point and bucket's teeth end has been reduced at maximum.

- Machine breakout digging forces and buckets performances are optimized.

### Flexibility
The pin-on quick coupler has been designed to be used with old and new generation pin-on Volvo buckets and all Volvo attachments range.

- Operator get more flexibility into new and old range pin-on Volvo buckets. Complete interchangeability between Volvo attachments.

### Versatility
The pin-on quick coupler has been designed to attach pin-on buckets generation in face mode or front shovel position.

- Volvo buckets can be used for final trench clean up. Operator get more versatility from his Volvo bucket for special trenching applications.

### V shape front hook
The quick coupler front hook is designed with V shape to hang up and take down easily attachments. Quick coupler engagement is easier.

- Attachments changes are easier for the operator. Time savings, more efficiency and productivity.
Not all products are available in all markets. Under our policy of continuous improvement, we reserve the right to change specifications and design without prior notice.
The illustrations do not necessarily show the standard version of the machine.

### Casted frame

Mechanical pin-on quick coupler frame is cast from high-strength carbon and manganese steel. This steel is suitable for general engineering purposes, especially where shock resistance, strength and wear resistance are important.

- More resistance to wear, low maintenance costs. Benefits on weight for more productivity.

### Safety front hook

Long and flat attachment bracket front hook. Attachment stay in the hook during locking and unlocking operations.

- Operator is in safety conditions during locking and unlocking operations. Attachments can be engaged or disengaged in safety positions during locking and unlocking operations.
