BRAKES

Brake system corresponds to ISO 3450.
Service brakes consist of a 2-circuit oil servo system with drum brakes on each axle.
Parking brake of drum type mounted on the gearbox. It is activated by spring power and servo released.
Digging brake without play is obtained through the same drum brake system.
Security system: The 2-circuit travel brakes are supplied with two accumulators in the event of failure in the service brake system.

UNDERCARRIAGE

Drive Train: One big variable piston motor on the mid-mounted two-step gearbox gives power to front and rear axles, both with hub reductions.

Framework: All-welded robust torsion box frame.

Wheels: Alternative single and twin wheels available.

Front axle: Oscillating ±7°.
