

VOLVO EXCAVATOR

EC150

VOLVO

Transportability, performance, and v All standard features with the Volvo

Volvo offers a new excavator to meet customer needs. The new Volvo EC150 Excavator is designed to minimize costs and maximize profits on every job. It has all the power, speed and performance you expect from Volvo, in a package that's the right size for the work you need to get done. With its power and versatility, the Volvo EC150 can do anything you need, no matter how tough the jobsites. Volvo always provides you with the best performance, the highest quality, and superior operator comfort. Enjoy your work.

Power and performance, with excellent controllability

The Volvo excavator's excellent digging and lifting forces are a result of the high torque engine and its ability to drive the hydraulic system so that both high pressure and flow are achieved. Controllability is a requirement of the hydraulic design in the modern excavator, for example, in slope work, pipe laying, lifting operations and basement digging, etc. The Volvo excavator operator has excellent controllability for safe and productive operation.

ersatility...

EC150

Low noise and exhaust emissions

Extensive research and development have been given to designing a quiet machine for the sake of both the operator and his surroundings. The engine compartment is well sound-insulated. The low-emission engine effectively minimizes harmful waste products in the exhaust gases and meets all current emission regulations.

Good component coordination

A large percentage of the components and parts used in the EC150 are identical for different Volvo excavator models. This ensures efficient parts stocking and makes service personnel's work easier.

Good fuel efficiency

The combination of the integrated engine speed control and the mode selection switch, along with the efficient Advanced Hydraulic System, provide excellent fuel economy. Additional features, such as flow regeneration, boom and arm holding valves and hydraulic priority systems also contribute to excellent fuel efficiency and operation.

Comfortable cab

Everything in the operator's cab is designed to provide the operator with a pleasant and safe workplace, assuring high productivity throughout the working day.

The cab is roomy and ergonomically designed with low noise levels and good ventilation, ease of operator adjustments, and precise controls.

Many attachment combinations

With various arms and two Volvo quick couplers available, Volvo has a solution for almost every work need.

The boom and arms are designed and manufactured to withstand extreme stress and provide long reliable life. The optional hydraulic quick coupler enables the operator to switch easily between different buckets or tools.

Undercarriage

The undercarriage is a long crawler design and equipped with track frames of the highest quality.

Planetary reduction units, with enclosed travel motors, provide high tractive forces and are well protected by the undercarriage.

Technology on Human Terms

Volvo Construction Equipment Group is one of the world's leading manufacturers of construction machines, with a product range encompassing wheel loaders, excavators, articulated haulers, motor graders and more.

The tasks they face vary considerably, but they all share one vital feature: technology, which helps man to perform better: safely, efficiently and with care of the environment. We refer to it as Technology on Human Terms.

The sheer width of the product range means it is always possible to choose exactly the right machine and attachment for the job. Each machine also comes with the quality, continuity and security represented by the Volvo name.

The strength of the service and parts organizations. The security of always having immediate access to leading-edge research and technical development. A machine from Volvo meets the very highest demands in all kinds of jobs, under all conditions, the world over.

Volvo Construction Equipment Group develops, manufactures and markets Volvo and Champion construction equipment. We are a Volvo company with production facilities on three continents and a market presence in over 100 countries.
