TRANSMISSION

Allison CLT-6063, remote-mounted, planetary type, with integral torque converter featuring automatic lockup in all ranges for improved fuel economy. Allison Transmission Electronic Control provides park brake interlock and hoist interlock as well as built in diagnostics. Trim Boost Soft Shift provides smooth shifting to help reduce operator fatigue. Six fully automatic forward speeds and two selectable reverse speeds to supply the operator with more flexibility in any application.

STEERING SYSTEM

Closed-center, full-time hydrostatic power steering system using two double-acting cylinders, pressure limit w/unload piston pump and brake actuation/steering system reservoir. Accumulator provides supplementary steering in accordance with SAE J1511, ISO 5010. Tilt/telescopic steering wheel with 35° of tilt and 5715 mm 2 1/4" telescopic travel.

Steering Angle				40°	
Turning Circle (SAE)	m	ft in	19,28	63'3"

TIRES

Standard - Front and Rear
24.00-R35(**)E3 Radial
Optional tires, brands and treads available.

Rim Width
mm in 432 17

HYDRAULIC SYSTEM

Two (2) Euclid two-stage cylinders, double-acting in second stage, internal cushion (extend and retract), inverted and outboard mounted. Separate Hoist/Brake Cooling reservoir and independent tandem gear pump. Control valve mounted on reservoir.

Body Raise Time	S		10.0	
Body Float Down Time	S		14.0	
Body Power Down Time	S		11.0	
Brake Cooling Pump Output	I/m	gpm	176	47
Hoist Pump Output	I/m	gpm	468	123
System Relief Pressure	kPa	psi	17 237	2500

BRAKE SYSTEM

Brake system complies with SAE J1473 and ISO 3450.

All-hydraulic actuated braking system providing precise braking control and quick system response. The brake controller has a unique variable front to rear brake proportioning that maximizes the stopping performance under slippery road conditions without having to deactivate front brakes.

Service

All-hydraulic actuated front disc brakes and rear oil-cooled wet disc.

Front Axle - Dry Disc

Disc Diameter Each (2 discs/axle)	mm	in	68,6	27
Brake Surface Area	cm ²	in²	4 129	640
Lining Area Per Axle	cm ²	in ²	2 787	432
Brake Pressure (Max.)	kPa	psi	15 859	2300

Rear Axle - Oil-Cooled Wet Discs

Brake Surface Area Per Axle cm² in² 59 862 **9278**Brake Pressure (Max.) kPa **psi** 4 482 **650**

Secondary

Two independent circuits within the service brake system provide back-up stopping capability. System is manually or automatically applied to stop machine within prescribed braking distance.

Parking

Drum, two shoe internal expanding type mounted on transmission output shaft. Controlled by a toggle switch on the dash. Automatically applied if brake hydraulic pressure is lost.

Size mm in 305 x 127 12" x 5"

Retarder

Foot-operated valve controls all-hydraulic actuation of oil-cooled wet disc brakes on rear axle. System provides modulated pressure to rear brakes for constant speed control.

Capacity VTA28-C Engine

Continuous	661	886	
Intermittent	1275	1710	

WET DISC BRAKE

The Euclid-designed wet disc brake is engineered for long service life even in the most extreme environments. The wet disc brakes are located on the rear axle and provide

service braking, secondary braking, and retarding. The brakes are a multi-plate design, and continuously oil-cooled. The sealed design protects against environmental contamination for prolonged service life. The wet disc brake is designed with automatic retraction to prevent drag. Separate pedals activate the service braking and retarding functions.

COMMAND CAB III

Command Cab III integral ROPS (Rollover Protection Structure) is standard in accordance with SAE J1040 (1988c) and dimensions comply with ISO 3471. Double-wall construction of 11 gauge inner and outer steel panels, lends

itself to a more structurally sound cab. Foam rubber lining material along with foam rubber-backed carpeting and multiple layered floor mat act to absorb sound and control interior temperature. A properly maintained cab from Euclid, tested with doors and windows closed per work cycle procedures in ANSI/SAE J1166 (1990), results in an operator sound exposure Leq (Equivalent Sound Level) of 79dB(A). A three-point rubber iso-mount arrangement to the deck surface minimizes vibration to the operator compartment.

Excellent Serviceability. A removable front closure allows easy access to service brake valves and retarder valve. The upper dash utilizes four (4) removable panels that house gauges and customer options, each individually accessible. A removable closure located behind the seat provides easy access to the shifting control, CONTRONIC, and all electrical junction points.

Comfort and Ease of Operation. A wrap-around style dashboard positions controls within easy reach and visual contact. A full complement of easy-to-read gauges, CONTRONIC monitoring and warning system, a spacious environment, six-way adjustable mechanical seat, tilt/telescopic steering wheel, filtered ventilation, door locks, and a full size padded trainer seat, all contribute to operator safety and comfort.

Standard and optional equipment may vary from country to country. Special options provided on request. Consult Euclid Market Support.

Note: Dimensions shown are for empty machine with 24.00-35 tires.

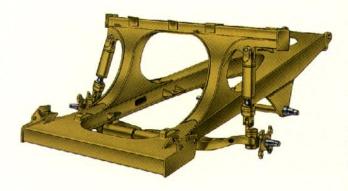

SUSPENSION

Front and Rear Suspension

For years, Euclid haulers have enjoyed an industry-wide reputation for superior suspension systems. That experience and knowledge has now been pushed to the next level, to develop the truly advanced ACCU-TRAC suspension for the R65. To make sure it was fine tuned to the limit, Lotus Engineering, a world leader in suspension design was contracted to review the entire system to assure optimized ride and handling performance.

The new ACCU-TRAC suspension system features independent trailing arms for each front wheel with NEOCON struts, containing energy absorbing gas and compressible Neocon-x fluid, mounted between the king pins and the frame. This arrangement allows a wider front track that provides a better ride, improved stability and a reduced turning circle. The rear axle housing has an A-frame mounting. The rear NEOCON struts are mounted in a more vertical position which allows a more pure axial loading and reduces the tractive and braking forces transmitted to the nose cone.

NEOCON struts outperform competitive strut designs by improving isolation, stability, and control. Improved isolation means reduced impact loading on the structural members of the machine and greater operator comfort, resulting in longer equipment life and increased productivity. Improved stability means more consistent dynamic response of the machine to fluctuating load energy, resulting in predictable machine performance. And improved control means better machine maneuverability.

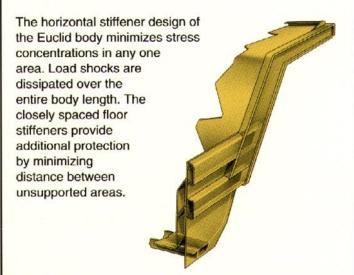

The Euclid frame and ACCU-TRAC suspension system are designed to work in unison to provide maximum structural integrity and operator comfort. The fabricated rectangular frame rail construction provides superior resistance to bending and torsional loads while eliminating unnecessary weight. The unique ACCU-TRAC independent trailing arm suspension absorbs haul road input, minimizing suspension-induced frame twisting while providing independent tire action. NEOCON ride struts are mounted with spherical bushings, eliminating extreme sidewall forces by ensuring a purely axial input to the ride strut. The wide track stance of the ACCU-TRAC suspension system and the long wheel base assure a more stable, comfortable ride.

BODY

Flat chute type, sloped floor, continuously exhaust heated. High tensile strength 1310 N/mm² 190,000 psi alloy steel 400 BHN used in thickness of:

	mm	in
Floor	18	11/16"
Front	10	3/8"
Sides	8	5/16"
Canopy	6	1/4"
Optional Body Liners		
Floor & Top Rails	10	3/8"
Sides & Front	6	1/4"

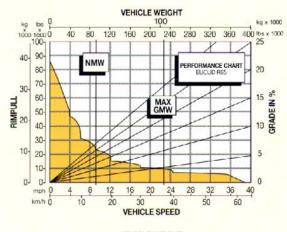

SERVICE CAPACITIES

	liters	gallons
Crankcase (incl. filters)	60,6	16.0
Transmission (incl. filters)	71,9	19.0
Cooling System	208,2	55.0
Fuel Tank	700,2	185.0
Hydraulic		
Hoist Tank	174,1	46.0
Steering Tank	98,4	26.0
Drive Axle	50,3	13.3

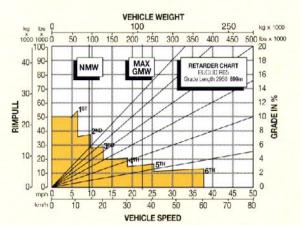

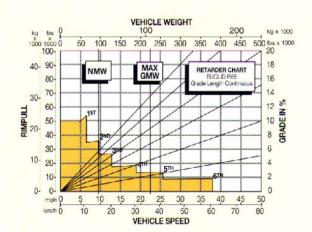

FRAME

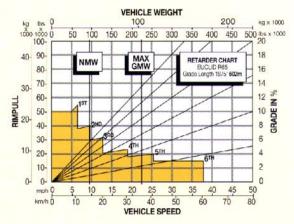

Full fabricated box section main rails with section height tapered from rear to front. Wider at the rear to support the loads and narrower at the front to allow for engine accessibility. One piece top and bottom flanges that eliminate cross member tie in joints and provide a large exposed center area for access to major components. Large radii at frame junctions are blended and ground to minimize stress concentrations. Weld joints are oriented longitudinally to the principal flow of stress for greater durability and more strength. Frame utilizes 310 N/mm² 45,000 psi yield strength alloy steel that is robotically welded to ensure high quality welds.

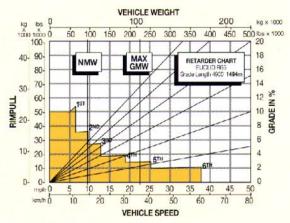

INSTRUCTIONS:

Diagonal lines represent total resistance (Grade % plus rolling resistance %). Charts based on 0% rolling resistance, standard tires and gearing unless otherwise stated.

- Find the total resistance on diagonal lines on right-hand border of performance or relarder chart.
- Follow the diagonal line downward and intersect the NMW or GMW weight line.
- From intersection, read horizontally right or left to intersect the performance or retarder curve.
- 4. Read down for machine speed.

NOTE: Photos and illustrations throughout may show optional equipment.

Under our policy of continuous product improvement, we reserve the right to change specifications and design without prior notice. The Illustrations do not necessarily show the standard version of the machine.
