# EC300E HYBRID

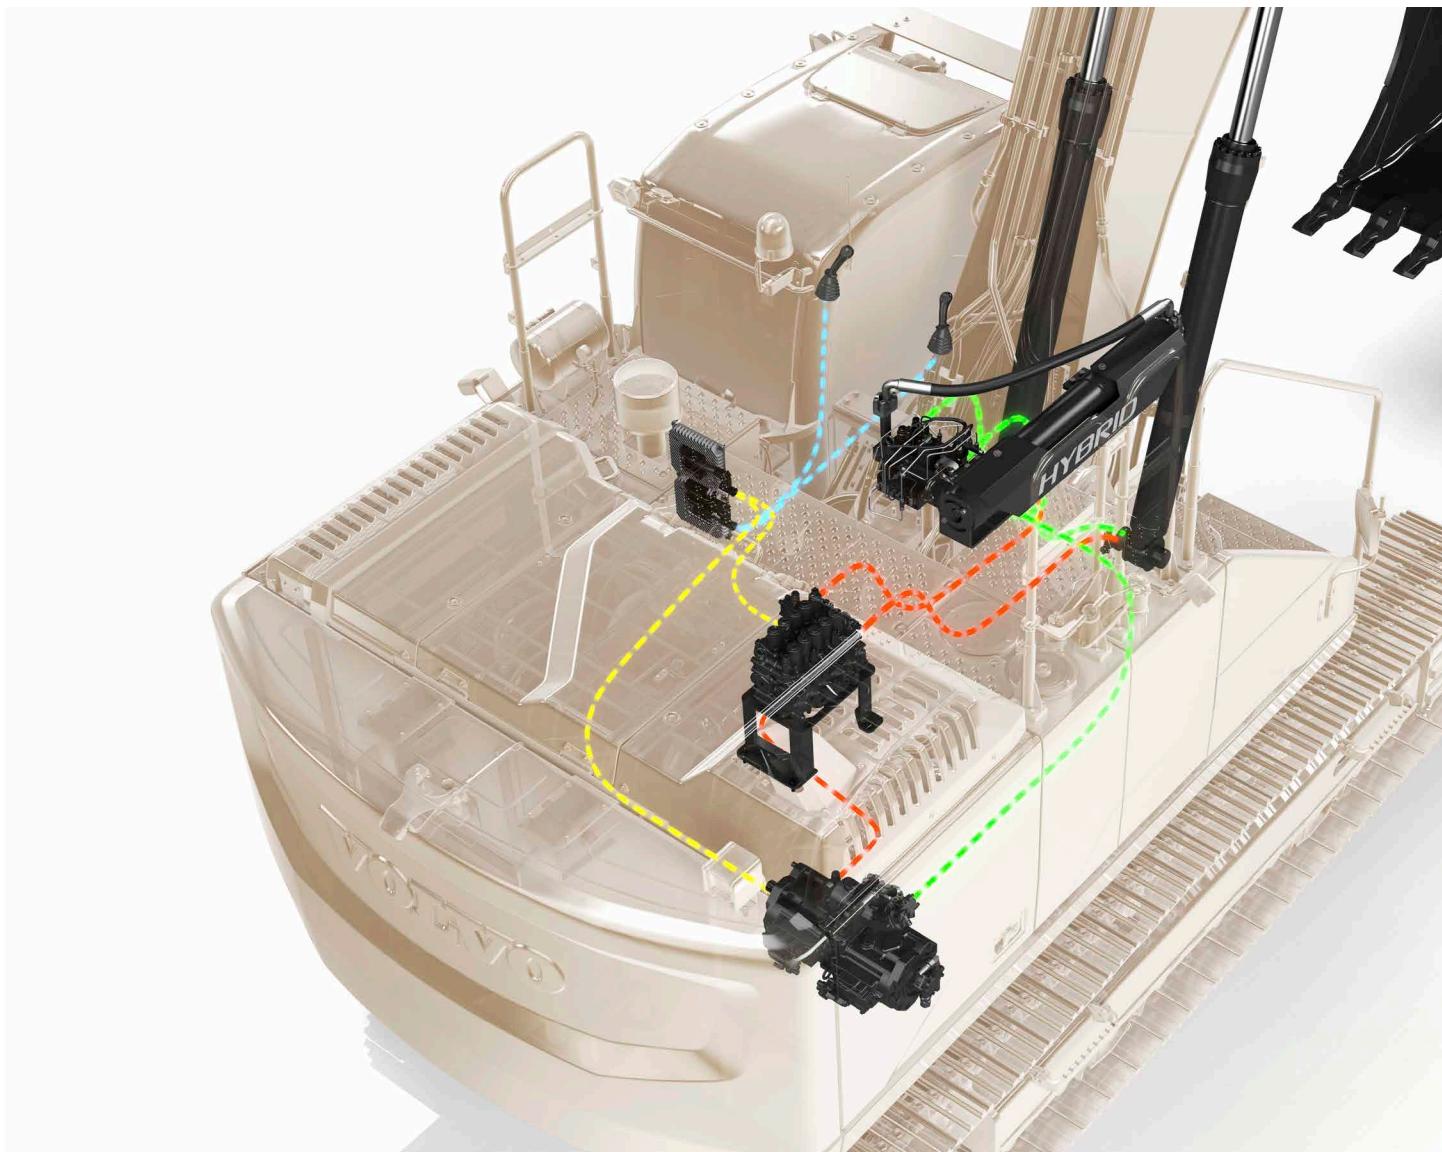

Volvo Excavators

# Simple solution, big savings

Introducing the new EC300E Hybrid. Featuring unique hydraulic hybrid Volvo technology, the excavator uses the boom down motion to charge an accumulator, with the stored energy driving an assist motor, lowering the torque requirement on the engine.

This results in up to 15% lower fuel consumption while delivering all the power and performance you would expect from a conventional EC300E.

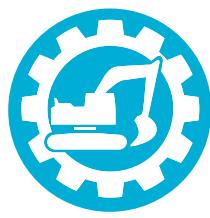

## Simply reliable

The uncomplicated and reliable hybrid solution is easy to maintain and consists of just a handful of add-on components, meaning no disruption or complication to how the high performing EC300E is engineered.

#### Cleaner and greener

The EC300E reduces CO<sub>2</sub> emissions by up to 12% making it a more environmentally respectful choice, especially when working in built-up areas.

#### The value of efficiency

When working in dig and dump applications, the EC300E Hybrid is a straightforward solution with big payback. Save fuel, lower emissions and boost the profitability of your operation.

## Engine

The latest generation, Volvo engine Tier 4 Final emissions compliant diesel engine fully meets the demands of the latest, emissions regulations. Featuring Volvo Advanced Combustion Technology (V-ACT), it is designed to deliver superior performance and fuel efficiency. The engine uses precise, high pressure fuel injectors, turbo charger and air-to-air intercooler, and electronic engine controls to optimize machine performance. Air Filter: 3-stage with precleaner. Automatic Idling System: Reduces engine speed to idle when the levers and pedals are not activated resulting in less fuel consumption and low cab noise levels.

## Hybrid

The simple and reliable hybrid solution, Volvo's novel hydraulic hybrid takes 'free' energy generated by the boom down motion and uses it to reduce fuel consumption. The powerful and regular boom-down motions charge the 5.3 gallon (20 litre) hydraulic accumulator, which then delivers energy to drive a hydraulic assist motor. There is the same level of controllability and performance as the standard EC300E.

Accumulator		
No. of accumulator		1
Displacement	l (gal)	20 (5.3)

## Electrical system

High-capacity electrical system that is well protected. Waterproof double-lock harness plugs are used to secure corrosion-free connections. The main relays and solenoid valves are shielded to prevent damage. The master switch is standard. Contronics provides advanced monitoring of machine functions and important diagnostic information.

Voltage	V	24
Batteries	V	2 x 12
Battery capacity	Ah	200
Alternator	V/A	28/110

## Undercarriage

The undercarriage has a robust X-shaped frame. Greased and sealed track chains are standard.

Top rollers		2 x 2

## Cab

The operator's cab has easy access via a wide door opening. The cab is supported on hydraulic dampening mounts to reduce shock and vibration levels. These along with sound absorbing lining provide low noise levels. The cab has excellent all-round visibility. The front windshield can easily slide up into the ceiling, and the lower front glass can be removed and stored in the side door.

Integrated air-conditioning and heating system: The pressurized and filtered cab air is supplied by an automatically-controlled fan. The air is distributed throughout the cab from 14 vents.

Ergonomic operator's seat: The adjustable seat and joystick console move independently to accommodate the operator. The seat has nine different adjustments plus a seat belt for the operator's comfort and safety.

## Swing system

The swing system uses an axial piston motors, driving a planetary gearbox for maximum torque. An automatic holding brake and anti-rebound valve are standard.

Max. slew speed	r/min	10.7
Max. slew torque	kNm (ft lbf)	110.9 (81,795)

## Travel System

Each track is powered by an automatic two-speed shift travel motor. The track brakes are multi-disc, spring-applied and hydraulic released. The travel motor, brake and planetary gears are well protected within the track frame.

Max. drawbar pull	kN (lbf)	248 (55,753)

## Hydraulic system

The new electro-hydraulic system and new MCV (main control valve) use intelligent technology to control on-demand flow for high-productivity, high-digging capacity and excellent fuel consumption.

The following important functions are included in the system for optimum performance:

**Summation system:** Combines the flow of both hydraulic pumps to ensure quick cycle times and high productivity.

**Boom priority:** Gives priority to the boom operation for faster raising when loading or performing deep excavations.

**Arm priority:** Gives priority to the arm operation for faster cycle times in leveling and for increased bucket filling when digging.

**Swing priority:** Gives priority to swing functions for faster simultaneous operations.

**Regeneration system:** Prevents cavitation and provides flow to other movements during simultaneous operations for maximum productivity.

**Power boost:** All digging and lifting forces are increased.

**Holding valves:** Boom and arm holding valves prevent the digging equipment from creeping.
